Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

Contents

Foreword ix

Acknowledgements xi

1. Introduction

Overview 2

Reducing the impacts of weather, climate and ocean extremes 4

A brief review of relevant climate science 7

Concepts and terminology 9

Scope and structure of this book 10

References 11

2. Assessing the consequences of extremes: Concepts, terminology, and methods

Introduction 15

Approaches and methods for assessing the impacts of extreme events 19

Scale – Importance, challenges and advances 52

Detecting and attributing the impacts of extremes 56

Confidence and uncertainty 59

Conclusions 61

References 62

3. Assessing the impacts and risks of specific extremes, and the wider consequences for sectors

Introduction 73

Assessing the direct consequences of specific extremes 73

Assessing the wider consequences of extremes 85

Summary and conclusions 115

References 115

4. The direct consequences of weather, climate and ocean extremes

Introduction 133

Overview 134

Integrated assessments 136

The direct consequences of specific weather, climate and ocean extremes 143

Summary and conclusions 182

References 184

5. The wider consequences of weather, climate and ocean extremes

Introduction 199

Overview 199

Ecosystems and species 200

Extreme runoff and flooding 204

Drought 209

Wildfires 211

Humans, and their health and habitats 222

Food production systems and food security 226

Animal health and welfare 227

Industry and commerce 229

Infrastructure, and transport systems 231

Coastal zones and oceans 235

Summary and conclusions 236

References 237

6. From hindsights and insights to foresights

Introduction 249

Hindsights 250

Insights 251

Foresights 258

Conclusions 262

References 262

Index 267
